

JOHN'S PORTFOLIO PROJECT

My original Bootstrap App/site was a multipaged static music info/learning/coverart-browsing named - NuMusic that I got as far as creating skeletal pages & placeholders..

Which has now evolved to a React App that will allow for utilizing almost, if not all of the stuff learned in the Bootcamp. No longer Music focus (for now..), instead more of an image/photo/postcard-ish App.

It will include the following NPM addons, but not limited to:

- ☐ React-route
- ☐ Redux
- ☐ Mui
- ☐ React-bootstrap

And the following mix, but not limited to, of Bootstrap & Mui based components:

- ☐ NavBar
- ☐ SideBar
- ☐ MuiCard
- ☐ ImagesList
- ☐ CardsList
- ☐ Carousel
- ☐ CardsCarousel
- ☐ SettingsPanel
- ☐ CardsListsCarousel (Optional)

Functionally, it will allow for:

- ☐ Use localStorage
- ☐ Settings for app/layout adjustments
- ☐ Like, Comment on SplashCards
- ☐ Add SplashCards to Personal CardList
- ☐ * Component to Generate a HTML based PostCard from the Personal CardList to Recipient(s).

React vs Bootstrap - React handsdown way better/slicker - like Bootstrap (CSS/HTML/JS) on steroids ;)...

Name of new App: **splash-cards**, Repo: <https://github.com/jonxie5/splash-cards>
